

New GSM Security Camera EYE-02 developed by JABLOCOM company: ALL-IN-ONE solution for property guarding

JABLOCOM, recently specializing in GSM Desktop Phones, is coming with a **GSM Security Camera**.

Launching this product is a return to traditional sphere of professional security systems typical of JABLOTRON holding members.

„We would like JABLOTRON to be understood as a stable brand name in development and distribution of useful inventions in security business. Every new product offers customers another opportunity to improve the protection level of their properties and health“, says Mr. Dalibor Dedek, a Managing Director of JABLOTRON holding.

The new GSM Security Camera is suitable for DIY installation as it can be easily installed and set by an end-user. This distinguishes it from standard JABLOTRON products for professional installation. The principle is **similarly simple** to a mobile phone – insert a SIM card and a battery and start using.

By installing the device the customer obtains much more than a GSM camera – EYE-02 is a simple, but complex security device with a wide range of built-in detectors: PIR motion sensor, sound detector, glass-break detector, motion-in-picture detector and tilt and position detector. In addition the Camera is compatible with the whole range of JABLOTRON OASIS professional wireless detectors. Highly sophisticated software of the powerful signal processor makes the controlling simple even for a common user. On the other hand, it provides enough space for own device settings to technically advanced user.

„**It is, in fact, ALL-IN-ONE solution** that has a serious ambition to replace a professional camera and security system **for a considerably lower price**. The main advantage is that the user is able to install it by themselves, easily and within a few minutes. It can all start work right on the day when **they decide to protect their own home, garage or summer house**“, says Jiri Meloun, a Managing Director of JABLOCOM.

The GSM Security Camera guards the required area and at the moment when any detector is activated, it sends an SMS, an MMS, makes a phone call or sends an e-mail. To make the setting really simple there are five pre-set guarding profiles – HOME, OUTDOOR, GARAGE, SHOP and CARE for watching infants, elderly and disabled people. The Camera can be used wherever there is coverage of GSM network signal. And can even work out of the electricity network as it contains a backup battery. Pictures of the guarded area will reliably inform you about the alarm events. At the same time pictures and videos are stored on a memory microSD card where they can be archived for up to several months. Special PC software enables a simple and user-friendly control and setting of the Camera as well as viewing the archive events. A special benefit is a **remote access to the Camera records through JABLOCOM www server** from any PC with an Internet access.

Successful cooperation with **GSM providers** worldwide – unique tariffs and media support to JABLOCOM GSM Desktop Phone should provide a high-quality distribution network for the Camera. Flexibility and reliability of these solutions have already been appreciated by customers of Vodafone, Telefónica O2, Orange, T-Mobile, TeliaSonera etc. The aim of the project is to address the saturated mobile phone market and to provide GSM providers with new alternative GSM products. As a first JABLOCOM's product, the Camera will be offered also within standard distribution network.

About companies:

JABLOCOM, a member of the JABLOTRON GROUP, develops, produces and delivers GSM communication solutions. A growing team of experienced engineers reacts promptly for challenges in the fast developing telecommunication market and finds new applications of contemporary communication technologies for customers. Our world-wide recognized product line of GSM Desktop Phones has attracted GSM providers and customers in more than 20 countries since their launch in February 2005.

JABLOTRON ALARMS has been established in 2008 when it spun off from company JABLOTRON, established in 1990. JABLOTRON ALARMS develops, manufactures and sells security systems in more than 70 countries of the world. Security system OASIS, designed to protect your home, is the best selling security system in Czech Republic. A considerable part of JABLOTRON's success is due to a widespread network of companies installing the security systems, who have been closely cooperating with JABLOTRON since the beginning.
